Art Unit: 3712

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Surintrspanont. Note the embodiment of fig 6 having a slot 34 therein to receive a wireless tag.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 1 is rejected under 35 U.S.C. 102(b or e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over the applicants own disclosure of the prior art in view of Brady et al. or Reddy. The applicant appears to admit that it is prior art to provide a stuffed toy or doll with a tag, the tag capable of being read wirelessly (see the specification at page 2 second paragraph). Should claim 1 be deemed to avoid this admission because it requires a particular kind of tag, Brady and Reddy are cited to show that the use of RFID tags in a variety of applications (such as the general teaching in Reddy for toys) is prior art to the claimed invention. Accordingly it would have been obvious to replace the prior art tag as admitted by the applicant

Art Unit: 3712

with known RFID tags for the purpose of facilitating more convenient storage and retrieval of information relating to the toy.
